Gitlab hooks for Studio

Hi

I am in the process of trying to implement version control software with studio. Has anyone got any recommendations (either Linux based/windows based) as a place to start I have installed Gitlab and I wanted to know whether anyone has come across any obstacles using this.

I was also wondering whether anyone has developed any hooks for Gitlab that works well with Studio as I would prefer if there was a more integrated solution with studio? Any help with this would be great.

Thank you.

Kind Regards,

Salma
