How to create productions via routine

Hi All,

I am trying to create a production from a script(routine).

I am using the below way to create an empty production

```
Set oProd=##class(Ens.Config.Production).%New()  
Set oProd.Name="Test.NewProduction"  
Set oProd.ActorPoolSize=1  
Set status=oProd.%Save()
```

But when i tried to start the production, i am getting an error as "Test.NewProduction" class does not exists.

Is there any other way to create the production via routine or terminal using commands as above?
