## Username/Password requirement for Caché session

I am setting up a new Caché instance and I have managed to configure it where Caché username/password is required to initiate the Caché session:

```
csdfalsdkjf@fra23e234sco:/opt/labmed/test/test81/proc$ csession cache1
```

Node: frxxco, Instance: CACHE1

Username:

I cannot find the setting in the management console that allows for unauthenticated login to a Caché session. Any help is much appreciated.

[#Authentication](#) [#System Administration](#) [#Caché](#)
