access token not recovered from url

Hi community ,

i use postman for testing my request , i need to extract access token from it (i put it inside the "Get url" using post man before sending my request).

i use the `GetAccessTokenFromRequest` of (`%SYS.OAuth2.AccessToken`) class , but in my rest code party , when i send request from post man , i can't extract my access token, it's empty.

can please give me help?

thank you
