## What file name convention should I use when uploading a text file of Objectscript on an Apple mac?

Hi,

I have an Atelier question.

I have a routine developed in Studio to upload a tab-delimited text file to process using Objectscript into Cache.

In Windows, to upload the file " test.txt ", I used the Objectscript commands,

```
Set uploadfilename = "c/testdata/RNAseq/GDC download 11-19-17/GDC download 11-19-17
counts/GDC download 11-19-17 unzipped/test.txt"
    set file = ##class(%Stream.FileCharacter).%New()
    set file.Filename = uploadfilename ; pass in the file name of the file you want
to open.
```

How should this be done on a mac?

Should I use the UNIX,

```
Set uploadfilename =
"\Users\peterpiper\Desktop\testdata\RNAseq\GDC download 11-19-17\GDC download 11-19-1
7 counts\GDC download 11-19-17 unzipped\test.txt"
```

Or, the mac OS style,

```
Set uploadfilename =
"Macintosh HD:Users:robertharris:Desktop:testdata:RNAseq:GDC download 11-19-17:GDC do
wnload 11-19-17 counts:GDC download 11-19-17 unzipped:test.txt"
```

Or something else to upload a text file into Cache using %Stream.FileCharacter?

Thanks,

Bob Harris
