Disable Service/Process/Operation from a function?

Hi,

I am working on a custom service that reads from a file and import content into a global. The problem is that global is also used by other processes. I have been trying to find any way to stop/disable a process from cache code so after reading the file, process is stopped, global updated and then process is restored. But I could not find anything, just to start/stop the whole production

```
Do ##class(Ens.Director).StopProduction()
```

Any ideas if this is something that can be done in ensemble?

Thanks
