Studio Equivalent Keys in Atelier

Well my last post got cut off for some reason. I am trying the new beta and wondering about the following functionality from Studio that I don't find in Atelier:

F12 = Open the routine and jump to the tag of the current call the cursor is on in a routine

F2 / <Ctrl> F2 = jumping to a bookmark / toggling a bookmark

<Ctrl> G = Jump to a tag in the code

When might these things be in Atelier? I use them a lot in Studio and the absence of these really slows me down.
