Service Unavailable while invoke rest url

Hi. I am learning create Rest service with Cache. From this repo. <https://github.com/intersystems-ru/REST>

I created new web application from Web Applications section in Management Portal. Such as screenshot. In browser call <http://127.0.0.1:57772/rest/test> . But got "Service Unavailable" 503 response. Could you please help?

Edit definition for web application /rest:

The screenshot shows the configuration page for a REST web application. The tabs are General, Application Roles, and Matching Roles. The General tab is active. The configuration is as follows:

- Name:** /rest (Required, e.g. /csp/appname)
- Description:** (Empty)
- Namespace:** USER (Namespace Default Application:)
- Enabled:** Application, CSP/ZEN, Inbound Web Services, DeepSee, iKnow
- Permitted Classes:** (Empty)
- Security Settings:** Resource Required: (Dropdown), Group By ID: (Dropdown), Allowed Authentication Methods: Unauthenticated, Password, Kerberos, Login Cookie
- Session Settings:** Session Timeout: 900 seconds, Event Class: (Dropdown), Use Cookie for Session: Always, Session Cookie Path: /rest/
- Dispatch Class:** isc.REST
- CSP File Settings:** Serve Files: Always, Serve Files Timeout: 3600 seconds, CSP Files Physical Path: (Browse...), Package Name: (Empty), Default Superclass: (Empty), CSP Settings: Recurse, Auto Compile, Lock CSP Name
- Custom Pages:** Login Page: (Empty), Change Password Page: (Empty), Custom Error Page: (Empty)
