How to create a Storage type with Global format in Cache classes

Hi Guys,

I would like to know, how to setup a global structure in Cache classes storage type.

I want to set a global like below in Cache classes using Storage methods.

```
^A ( " ID1 " ) = "Name\Abb\Map"
```

```
^A ( " ID2 " ) = "Name\Abb\Map"
```

```
^A ( " ID3 " ) = "Name\Abb\Map"
```

```
. . .
```

If any lead it would be appreciated.

Thanks,

Arun Kumar Durairaj.
