I am curious about Terminal function

Hi global developers!

I am using terminal but I have some problem with it.

I use \$C(1) (ascii code 1) to separate data but I can't see it in the terminal and This is really hard to see in the table.

So I want to get you guys good brain and skill :)

how can I see it in the terminal ?

Terminal(intersystems) :

I can't see anything

another program :

It replaced ascii code 1 (=SOH) to (Special Character)

I want to see like another program in InterSystems's terminal.

Thank you smart developers!
