## SQL Outbound Adapter - Query not returning data as expected

Hi all,

I have an operation which uses the SQL outbound adapter to query a data source set up using a system DSN on the server which uses the InterSystems ODBC35 driver (this is a cache db hosted elsewhere).

Whenever Ensemble runs the following query:

```
SELECT Inkdid,  
cfastsearchcode,  
cdrugfull  
FROM JAC.drugbasic  
WHERE cdrugfull LIKE 'Para%'
```

No data is returned, however running the same query via SQL Server Management Studio, all expected rows are returned.

Also if I run the following via Ensemble:

```
SELECT Inkdid,  
cfastsearchcode,  
cdrugfull  
FROM JAC.drugbasic  
WHERE cdrugfull NOT LIKE 'Para%'
```

This returns all the rows as expected

It's probably obvious to someone what the issue is, any help much appreciated.
