Setting Authentication Roles from LDAP Group

I am working through trying to use ZAUTHENTICATE.mac and LDAP.mac to do Delegated sign on into Ensemble. In reading over the samples and the documentation, I am not clearly finding on how to set the Appropriate Role from the LDAP group I return. Can someone help explain this part to me? If I have a user sign on, and I return a "Group" from the Authentication, how do I get that to transform into the Role I need for Ensemble.

Thanks

Scott Roth
