What resources or services are needed to run the %File:FileSet query?

I was running the %File:FileSet class query, with my development user, but I am unable to run this query for an application user. Does anyone know what resource or service is needed to run this query? Assume the user has access to a certain directory on the file system needed for the query.

On second though, having tried almost all the available resources and services, perhaps the user doesn't have access to the directory. How to tell when the error is this:

```
set ok=st.%PrepareClassQuery("%File","FileSet")

d $system.Status.DisplayError(ok)

ERROR #5540: SQLCODE: -99 Message: User Laura_Test_DEV is not privileged for the oper
ation
```

Thanks,

Laura
