## InterSystems Launches FHIR® Sandbox at HIMSS18

The InterSystems FHIR® Sandbox is a virtual testing environment that combines HealthShare technology with synthetic patient data and open source and commercial SMART on FHIR apps, to allow users to play with FHIR functionality.

The sandbox is designed to enable developers and innovators to connect and test their own DSTU2 apps to multi-source health records hosted by the latest version of HealthShare. Share your experience with others or ask questions here in the [FHIR Implementers Group](#).

[Click here](#) to access the InterSystems FHIR® Sandbox.
