Replacing ZEN - Index to articles

Hi All

This is the index to a series of articles I hope to create over the coming months.

ZEN and ZEN Mojo are no longer being actively developed by Intesystems - this is a great shame as it is a fine product that works so well for business applications.

However ZEN is a 15 year old product and I need a path forward to replace the ZEN UI with a supported development framework.

This article is an index of the other articles I have, or plan to write. - the articles will be subject to change as I develop my thoughts and climb the learning curve.

Articles

- [Part 1 - Introduction](#) (published 2018-03-14 - - - last amend 2018-03-18)
- [Part 2 - Strategic Issues](#) (published 2018-05-11)
- [Part 3 - Progress to Date 001](#) (published 2018-05-11)
- ...
- ...

I know Caché well having used it for around 35 years, however it is a large product with many features that I don't know and/or use.

And no one in this world is omniscient

I may mistakes or miss a better way of doing things

-so please, comments are welcome!

[#Angular2](#) [#CSP](#) [#Frontend](#) [#ZEN](#) [#Caché](#)
