Exporting components of DeepSee

Hi community,

When I export the cube and the pivots that I made and import to another environment , the calculated metrics and dimension and also de pivot variable didn´t appear in the other environment. Because of this the pivot that use these metrics show error when you try to open.

I want to know that this behavior is normal or exist a way that you can export everything, independent if you build inside the cube or inside analyzer.

Thanks.

Jaqueline Krieger
