Problem with [/printpdf/446361#](#) on the %ZEN.Component.combobox

For the browser to not update the screen and direct you to top after the onchange event of the combobox, just remove href="#" from the piece:

```
html[html.length] = '<tr id="item_' + n + '_' + this.index + '" class="comboboxItem"
onmousedown="zenPage.getComponent('+this.index+').itemMouseDown(event, '+n+');"
onmouseup="zenPage.getComponent('+this.index+').itemMouseUp(event, '+n+');"><td width="100%"><a
href="#">'+text+'</a></td></tr>';
```

Of course to do this you'll have to customize the %ZEN.Component.combobox component and inherit it from %ZEN.Component.abstractComboBox.

This solved my problem with long pages and scroll.
