trying to copy an ampersand into the Value of an assign action

I am trying to copy a string that includes an ampersand into OBX3.1

I have tried multiple combinations of escape sequences and single/double quotes and about everything I can think of, but I cannot get the ampersand into the OBX3.1 field.

The screenshot shows the 'Assign' action configuration window in the InterSystems Developer Community. The window has three tabs: 'Transform', 'Action', and 'Tools', with 'Action' currently selected. The title is 'Details for the selected action'. Below the title, the word 'assign' is displayed in a large, bold font, followed by the description 'Set the value of a target property.' and a link to 'View documentation'. The configuration fields are as follows: 'Action' is a dropdown menu set to 'set'; 'Property' is a text field containing 'target.{ORCgrp().OBXgrp().OBX:ObservationIdentifie'; 'Value' is a text field containing '"\T\GDT"' with a magnifying glass icon to its right; 'Key' is a text field containing '""'; 'Disabled' is a checkbox that is currently unchecked; and 'Description' is a large, empty text area at the bottom. Explanatory text is provided for the 'Property', 'Value', and 'Key' fields, describing how to populate them by double-clicking on target properties or collection members in a diagram.

Transform Action Tools

Details for the selected action

assign
Set the value of a target property.
[View documentation](#)

Action
set ▼

Property
target.{ORCgrp().OBXgrp().OBX:ObservationIdentifie

Property whose value will be set. Double-clicking on a target property in the diagram will place that property in this field.

Value
"\T\GDT"

Value to assign to the property. Double-clicking on a property in the diagram will place that property in this field.

Key
""

For collection properties, this string specifies the member of the collection that is the target of this assignment.

Disabled
☐

Control whether this action and its children should be disabled.
