Debugging using Atelier 1.1 always throws java.lang.NullPointerException

Hi,

i have today

- update from Ensemble 2016.1.0.656.0 to 2017.2.1.801.0
- Java JDK 8 (U161) [latest Version]
- Eclipse (JavaScript & WebDev) Release 4.7.3
- Atelier 1.1 plugin (from Marketplace)
- Migrate a small testing Project

Trying "Debug":

- Debug Configurations ...
- "Atelier Application Attach" -> "New"
- Select Server, Choosing the process i want, "Apply", "Debug"

Error:

```
An internal error occurred during: "Launching Debug_xy".

java.lang.NullPointerException
```

Any idea, whats going wrong?

Many thanks in advanced

Dieter
