Git Flows and Continuous Delivery For InterSystems Data Platforms Webinar, 24th of April 2018

Hi, Community!

Continuous Delivery is a software engineering approach in which teams produce software in short cycles, ensuring that the software can be reliably released at any time. It aims at building, testing, and releasing software faster and more frequently. The approach helps reduce the cost, time, and risk of delivering changes by allowing for more incremental updates to applications in production.

Join us at 07:00 UTC, April 24th for a webinar with a live demo "Git flows and Continuous Delivery" by @ Eduard Lebedyuk

The language of the webinar is Russian.

Also, see the related articles on DC.
