Creating Manually Soap Request as string

I am trying to created SOAP request body that I need to post as string. I created the SOAP client and tried with this to get SOAP envelope. Can you suggest a way for this.

```
Set proxy=##Class(Client.Class.Client.Methodname).%New("Methodname")
Set proxy.Para1="a"
Set proxy.Para2="b"
Set tClient=##Class(Client.Class.Client).%New()
Do tClient.WriteHTTPContent(proxy,proxy.%RequestName,0,0,"","",.stream)
```

#Object Data Model #HealthShare
