Sync problems on startup

Often, the first time I start up Eclipse (Atelier plug-in), all of my local classes indicate "warning" as if they are out-of-sync. When I try to synchronize, I get the following error:

Synchronization failed: [server is broken] java.lang.ClassNotFoundException: Provider
org.glassfish.jersey.internal.RuntimeDelegateImpl could not be instantiated: java.lang.IllegalStateException: No
generator was provided and there is no default generator registered

The only way to correct this is to shut down Eclipse and restart. Is there a resolution for this?
