## %Library.Global Export

Hi,

I'm trying to export a global with this library %Library.Global with this call:

```
Do ##class(%Library.Global).Export(pstrNamespace, pstrGlobalName, pstrOutputPath,, "-d")
```

When I call this method \$ZERROR is setted to "<NOTOPEN>OpenDev+15^%Wprim"

Can someone tell me where is the problem on this?

Thanks a lot
