Load data from excel

Hi everybody,

 I need to load data from excel to a class in cache, but this class has foreign key and property like AS ..... (other class). This class represent an item product that belongs to a line, the line blelongs a group and the group belongs a Category.

Example:

```
Property bdGrupo As Innova.CL.Core.BD.Operacion.Producto.Grupo;

Property bdLineaPR As
Innova.CL.Core.BD.Operacion.Producto.Linea
 [ Cardinality = parent, Inverse = bdProductoCH ];

Property bdCategoriaProducto As
Innova.CL.Core.BD.Operacion.Producto.Mantenedor.CategoriaProducto;

Property Portafolio As %Boolean [ InitialExpression = 1 ];

Property modelo As %String;

Property alianzaObligatoria As %String;

Property bdMembresia As Innova.CL.Core.BD.Operacion.Producto.Mantenedor.Membresia;

Property bdAlianza As Innova.CL.Core.BD.Operacion.Producto.Alianza;

Property bdMoneda As Innova.CL.Core.BD.Configuracion.Base.Moneda;

Property bdMetrica As Innova.CL.Core.BD.Operacion.Producto.Mantenedor.Metrica;

Property plazo As %String;

Property precioLista As %Integer;

Property Descripcion As %String(MAXLEN = 2500);
```

 Someone has an example of a routine or method that loads data from CSV file with these characteristics.

Thanks a lot.

Jaqueline Krieger
