Strange Messages During Class Compilation (oops: ...)

During programmatic classes compilation performed by the code like this:

```
set status=$system.OBJ.Load(updaterFile,"cruk-d",,.resList)
```

strange messages appear in console log, e.g.

```
05/06/18-15:54:12:424 (308512) 0 oops: was expecting crc 0x21e96e85,5a4c8b2c for rtn (Update.Import.1) rbufnum-15523
```

```
...
```

```
05/06/18-16:17:45:305 (4224) 0 oops: was expecting crc 0x21e96e85,5a4c8b2c for rtn (U  
pdate.Import.1) rbufnum-15523
```

```
05/06/18-16:22:30:485 (4224) 0 oops: was expecting crc 0x21e96e85,5a4c8b2c for rtn (U  
pdate.Import.1) rbufnum-15523...(repeated 3 times)
```

Classes that were concerned stayed not compiled (with old object code untouched) till they were recompiled manually. To be fair, it happened only ones during several years.

I met such kind of messages several years ago in our development environment during attempts to compile a class that was opened for editing by somebody else. In the case under discussion it was very unlikely as it happened in production environment with no developers on site.

What are the possible reasons of such errors?

(Cache for Windows (x86-64) 2015.1.4)
