JSON - is this a bug??

Hi All

I'm sharing this ticket just posted to wrc as I believe it is inconsistent behaviour. and other developers may trip over it....

<wrc ticket>

I have found something that appears to me to be inconsistent
Simple example

```
set x={"theValue":true} write x.theValue  
this correctly converts true to 1
```

However if " (double quotes are placed around it

eg

```
set x={"theValue":"true"} write x.theValue  
it does not convert and displays the string "true"
```

!!!!

</wrc ticket>

Peter
