## request.GetValueAt Syntax to subfields

I have a vendor that is sending me an Abbreviation in FT1:16.4.2 that I need to look up against a table to find the correct ID for.

```
FT1|1|||20
180523161501|2018052
3161503|CG|1906551^Lipid Profile||1|||
|^|^LAB&06CL|||Z00.00||00410^Knerr^Joel||721410||30100001^Lipid Profile|
```

But in my Business Process when I refer to request.GetValueAt("FT1:16.4.2") its not recognizing that this field contains information. Is my syntax wrong?

[#Business Process \(BPL\)](#) [#HL7](#) [#Object Data Model](#) [#Ensemble](#)
