\$CASE For Long Stories

Hi, Community!

[\\$CASE](#) is a fine syntax sugar for "Ifs" with one-line/one-word expressions, like in docs:

```
SET daynum=$ZDATE($HOROLOG,10)
WRITE $CASE(daynum,
    1:"Monday",2:"Tuesday",3:"Wednesday",
    4:"Thursday",5:"Friday",
    6:"Saturday",0:"Sunday",:"entry error")
```

But if my expression for a current case is a multi-line business logic? Can I use "{}" somehow or better go with "IF" instead?
