## Localize DeepSee time dimension

I have a server with rusw locale but in my cube the time dimension shows dates such as "JAN-2018". Is there a way to either localize that (preferably) or just output numbers like "01-2018"?

Architect:

▼ Dimensions			
▼ PostDate	time dimension	PostDate	×
H1	hierarchy		×
Year	level 1	Year	×
Month	level 2	MonthYear	×
Day	level 3	DayMonthYear	×
Hour	level 4	HourNumber	×

Analyzer:

	All
◀ Jan-2018	183,555
◀ Feb-2018	127,695

Also in architect, in level settings there is a "Time Format" property, what's that? Tried setting it to 3 but it didn't help.
