## Do you use Application Licensing API? How?

Application licensing enables InterSystems application partners to take advantage of Caché ' s licensing capabilities for their own licensing purposes.

Caché manages customer application licenses just as it does Caché/Ensemble and InterSystems application licenses, maintaining usage counts and acquiring and returning user licenses as needed.

Application licenses consumed by a process or a CSP session are automatically released along with the Caché license consumed by the process or session when a process exits, halts or is deleted from the process table, or when a CSP session times out or is deleted.

More in [docs](#).

Do you use this feature? If so, how?

I'm especially interested in license validation and general workflows?
