(Webinar June 21) Active Directory Integration with LDAP

Do you want to simplify your user management by using Windows domain accounts? When you add LDAP integration to your system, you can:

- Use the same logins on all your instances
- Manage the user accounts centrally
- Stop worrying about synchronizing accounts between systems

In *Active Directory Integration with LDAP*, a live webinar (June 21, 11:00 a.m. EDT) Katherine Reid, Senior Support Specialist at InterSystems, will discuss the main options for integrating your user accounts with your domain, including delegated authentication and LDAP authentication.

Katherine will also walk through how you might set this up on your own system. After the webinar, you can practice what you've learned using a lab from InterSystems Documentation.

Register now!
