Atelier Server Configuration error

Hi,

When i try to configure my server connection in Atelier (Eclipse), i am getting the below exception.

java.lang.ClassNotFoundException: Provider org.glassfish.jersey.internal.RuntimeDelegateImpl could not be instantiated: java.lang.IllegalStateException: No generator was provided and there is no default generator registered

It was all working fine and i think that the only thing which i have done was installing some windows updates. Now when i try to configure the server configuration i started getting the above error, any suggestions to fix this?

Thanks,

Shameer
