## Alternative for %ZEN.Auxiliary.altJSONProvider).%ConvertJSONToObject

Hello,

I want to convert a json, which passed on in the a REST call, into a request message.

I use method %ConvertJSONToObject of the %ZEN.Auxiliary.altJSONProvider class.

```
Set sc = ##class(%ZEN.Auxiliary.altJSONProvider).%ConvertJSONToObject(%request.Content, "TestRequest",  
.request)
```

Is there an alternative for this? I want to avoid to use the %ZEN library.

Best Regards

Roger de Coninck
