Atelier 1.2 Stable Release

The Atelier 1.2 stable release update site (<https://atelier.artifactoryonline.com/atelier/updates/stable/1.2/>) has been updated to 1.2.119. This build contains all of the new features and enhancements the 1.2.118 beta build has as well as a number of bug fixes. Additionally, we have documented a list of the top time-saving keyboard shortcuts to help you become more productive. Give Atelier 1.2 a try and let us know what you think! Some of the key highlights include:

- Go to Line allows navigation to a specific tag+line (e.g.: MyProperty+12)
- New Tabbed Editor for BPL/DTL diagrams
- Support for [InterSystems IRIS Data Platform™](#)
- A list of useful keyboard shortcuts ([link](#))
- Validate server configuration credentials
- Code completion for Relationship class members
- Uncluttered Atelier perspective

See the [release notes](#) for the full list of improvements. Last but not least, InterSystems has attended its first [EclipseCon](#) this week as a proud Eclipse Foundation member. Stay tuned - Michelle Stolwyk, the Atelier Team Lead, will be sharing her key take aways with us next week.

FAQ: Eclipse could not render the Atelier perspective after upgrading to Atelier 1.2 ([link](#))
