## Is there a SQL Storage Map GUI in Atelier (any version)?

In Studio, you can open the inspector and view the SQL Storage Map on %Persistent classes. Can you do this in Atelier or do you have to read the XML text? If it doesn't currently exist, are there plans to include it? The inability to perform certain functions in Atelier that can be done in Studio can be a 'point of conflict' when asking/forcing/encouraging developers to move to Atelier.
