## %ProcessError+6 ^%Net.Remote.Proxy.1 error occurs inconsistently

Hi

I'm trying to learn me working with .NET libraries and Ensemble.

I have made a very simple .Net dll which just simple write a text to a file.

I have import the libraries in the studio , putted up a EnsLib.DotNetGateway.Service in my namespace. Everything by the book. The EnsLib.DotNetGateway.Service starts fine and i trigger the simple call by a fileinbound.adapter (tried in normal class as well. But i'm stuck in a error message i can't figure out what is wrong.

This is the error message:

"ERROR <Ens>ErrException: <ZJGTW>%ProcessError+6 ^%Net.Remote.Proxy.1 --  
logged as '-'

number - @'"

The code to call is simple:

```
Set conn = ##class(%Net.Remote.Gateway).%New() // No error here
Set tSC = conn.%Connect("127.0.0.1", "55000", "NETTEST") // No error here
Set api = ##class(writetofile.WriteFile).%New(conn) //Here comes the error
set strFile = "d:\temp\example.txt"
set strInput = "Hello world"
set ret = api.FilePut(strFile,strInput)
Set tSC = conn.%Disconnect()
```

If i just connect and disconnet to the [Net.Remote.Gateway](#) no error

[Here is the proxy classe](#)

```
Class writetofile.WriteFile Extends System.Object [ ProcedureBlock ]
{
```

```
Parameter IMPORTTIMESTAMP As STRING = "2013-07-17 16:40:43";
```

```
Method %OnNew(ByRef p0 As %ObjectHandle) As %Status
{
If '$D(p0) If ($IO["TCP"]) { Quit $$$OK } Else { Set x=$$$ERROR(
$$$RemoteGatewayError,"Gateway instance must be supplied") Zt "JGTW" }
```

```
Quit ..%Constructor(p0,"writetofile.WriteFile",0)
}
```

```
Method getuFileText() As %ObjectHandle
{
Quit ..%IR("getFileText" )
}
```

```
Method setuFileText(ByRef p0 As %ObjectHandle)
{
Do ..%I("setFileText" ,.p0)
}
```

```
Method getuFilePath() As %ObjectHandle
{
Quit ..%IR("getFilePath" )
}
```

```
Method setuFilePath(ByRef p0 As %ObjectHandle)
{
Do ..%I("setFilePath" ,.p0)
}
```

```
Method FilePut(ByRef p0 As %ObjectHandle, ByRef p1 As %ObjectHandle)
{
Do ..%I("FilePut",.p0,.p1)
}

}
```

Can anybody se whats wrong?
