## Atelier Eclipse Workspace Settings

My Atelier workspace used to maintain my settings, open files, window configuration, etc. when I would shutdown Eclipse and open it again later on my MacBook Pro. However, since I have upgraded to the latest version of Atelier 1.2.119 that no longer happens. I now have to open my last used files and reconfigure my windows the way I like them every time I start Eclipse/Atelier.

Anyone else have this issue? I have tried many things from Google searches to fix this but nothing has worked.
