## addressing ensemble webservice BS with security token from .net

Hi

we are trying to call a Webservice that is hosted on a Ensemble production from a .net program.

The web application in ensabmle is defined with password authentication

we can't get to set the security header in the .net program ( <soapenv:Header> ... <wsse:Security ...  
<wsse:UsernameToken ... ) in SoapUI we added the Wss usertoken and it worked like a charm.

Doe's anyone have a idea to guide us? (links, ,samples, etc. )

Thanks

Gadi
