## DeepSee Dashboard, all Widgets have "(Closed)" and cannot be edited

Hi,

- I cannot edit properties (title etc) of Widgets within Dashboards outside of the ENSDEMO namespace:
- I have a namespace "HL7Report" for example;
- I have some Pivots created looking into a cube's data;
- I click "DeepSee", "User Portal" from the Management Portal;
- I click "+", "Add Dashboard", folder/name/title/category all as "new", "OK", new dashboard appears;
- I click ">", "Widgets >", "+", and select a pivot to display as a table (chart / anything);
- I then CANNOT edit the properties of the Widget, I click the ">" again and every Widget I create is "new (Closed)"...
- I do the exact same thing in namespace "ENSDEMO" and they all have their ">" to edit them and their properties.

Hopefully there is just something remarkably simple I have missed in following the DeepSee tutorials / usage etc to allow other namespaces to create useful Dashboards... ??

I have tried export/import the 'working' example from ENSDEMO into HL7Report and still "(Closed)".

Thanking peoples in advance for their replies.
