%DOC with DeepSee

Hello,

I have imported my data with the following code (%DocDB).

```
set filename = "/home/student/Dokumente/convertcsv.json"
```

```
IF $SYSTEM.DocDB.Exists("Fitabase1") {
```

```
SET db = ##class(%DocDB.Database).%GetDatabase("Fitabase1")
```

```
}
```

```
ELSE {
```

```
SET db = ##class(%DocDB.Database).%CreateDatabase("Fitabase1")
```

```
}
```

```
set arr = ##class(%DynamicAbstractObject).%FromJSON(filename)
```

```
SET jstring = arr.%ToJSON()
```

```
//SET doccount = db.%Size()
```

```
DO db.%FromJSON(jstring)
```

Now I have data sets like

```
# ID %Doc %DocumentId %LastModified
```

```
1 1 {"Id":1503960366,"ActivityDate":"3/25/2016","TotalSteps":11004,"TotalDistance":7.1100001335144,"Trac... 1  
2018-07-16 16:00:50.836
```

```
2 2 {"Id":1503960366,"ActivityDate":"3/26/2016","TotalSteps":17609,"TotalDistance":11.5500001907349,"Tra... 2  
2018-07-16 16:00:50.837
```

```
3 3 {"Id":1503960366,"ActivityDate":"3/27/2016","TotalSteps":12736,"TotalDistance":8.52999973297119,"Tra... 3  
2018-07-16 16:00:50.837
```

1)How can I extract the data from %Doc, for example if I only want the ID or the ActivityDate.

2)Can I use this data in the Analyzer, DeepSee?

Thank you in advance for your help.
