Create studio project file

Hello guys,

I have been playing around with the deployment tools from Ensemble (mostly based on this article <https://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY...>), but so far the one thing I still couldn't figure out is how to group files into a single "Studio project file".

By using the deployment tool UI, supposing that I want to add a bunch of custom files to my deployment file (XML), it's practically impossible because I need to add one by one.

So the only way around it is using this idea of grouping files into a "Studio project file" and thereafter adding the "Studio project file" into my final deployment file.

Any clues?

Thanks
