Atelier. Compilation returns "Failed to read /api/atelier/v1/..."

When I try to compile through Atelier (Compile Project), I noticed that in compilation with error it returns this message 'Failed to read /api/atelier/v1/ ...':

No additional Atelier files to synchronize.

Compile failed: Failed to read /api/atelier/v1/ERP/action/compile?flags=ck

Compile failed: Failed to read /api/atelier/v1/ERP/action/compile?flags=ck

Compile failed: Failed to read /api/atelier/v1/ERP/action/compile?flags=ck

Compile failed: Failed to read /api/atelier/v1/ERP/action/compile?flags=ck

Does anyone know what can it be?

I'm using Atelier beta (latest), with web application configured as Password Authenticated and a user with %ALL.
