location not working to load new CSP page

I have a web application and one of the CSP pages contains the following snippets:

```
<script language="javascript">  
function SubmitForm(pid,sid) {  
//code to process form
```

```
alert ("study saved");
```

```
self.document.location="newpage.csp";
```

```
}
```

```
</script>
```

```
<form name="Studyform" method="post" onsubmit='return SubmitForm(#{SubjObj.%Id()}#,#{StudyObj.%Id()}#);' >  
<!-- form contents -->
```

```
</form>
```

The form is correctly processed, the object is saved, and the alert appears, but the new page does not get loaded and I cannot figure out why.

Any suggestions?
