Invalid precision value

Hi,

I'm trying to execute a function in a loop using studio but I'm having an error; "ODBC driver for sql server Invalid precision value"

Any help please?

Example :

```
for i=1:1:2{
```

```
...
```

```
SET expression1 = "exec [podm].[dbo].[UPEDITEIT] @PTEITID = ?, @PTEID = ?, @PTERAID = ?  
,@PTEVAL = ?, @PLOWREF = ?, @PHIGHREF = ?, @PLOWCRI= ?, @PHIGHCRI=? "
```

```
set pars(1) = -1  
set pars(2) ="A"  
set pars(3)= "A"  
set pars(4)="B"  
set pars(5)="C"  
set pars(6)="D"  
set pars(7)="E"
```

```
set pars(8)="F"
```

```
set pars = 8
```

```
set status = ..Adapter.ExecuteUpdateParmArray(.tRe, expression1,.pars)
```

```
}
```

It's working fine for the first time, but when it tries to execute for the second time I'm getting the error : "ODBC driver for sql server Invalid precision value"
