Caché-Fehler: CLASS DOES NOT EXIST *(No name)

Hi everyone

I encountered this error while trying to access a web service (I send a test message with soap ui):

FEHLER #5002: Caché-Fehler: <CLASS DOES NOT EXIST> *{my method &class name}*.1 *(No name)

I am not able to understand what goes wrong. If I look at the trace on messages in the ensemble message viewer there are no errors. The response message displayed in the trace looks like it is successful but in the SOAP UI tool I get the error message in the response.

Do you have any suggestions?

Thanks a lot and kind regards

Milena
