Query XML messages by Property Path

Hi

I need to query my messages and filter by a XML node.

In the message viewer it would be Critetion Type = 'VDoc Property Path' and class = 'Enslib.Edi.XML.Document'.

At the moment my query looks like this

SELECT *

FROM EnsLibEDIXML.Document

where doctype = 'avc:mydoctype'

I need then to look for 'HeadNode:SubNodeValue'

Anyone who could help me out with this?

Thank you
