Global Summit 2018 Solution Developers Conference 2018: Cloudy, with a Chance of Changing

Hi All,

Who, in the age of digital transformation, doesn't want to reap more benefits out of any process, procedure, and resource we have? At InterSystems Solution Developers Conference (part of InterSystems Global Summit 2018) we will have sessions on how to improve the way applications are built with modern tools like Docker containers, Gitlab, Circle CI, Travis, etc., how continuous integration and continuous delivery (CI/CD) processes can help us deliver more value quickly to the end-user, and how we can start thinking about modernizing traditional applications.

It's all part of a new way of thinking – the " cloud-first" way – in which people share more and silos are broken down. New approaches toward doing things are adopted, with tangible and innovative results. Check out what *InterSystems Cloud Manager* can do for you, as well.

Here are some sessions we're planning. I hope they will whet your appetite to come to learn about new, supported technologies that can change the way you look at your application:

- Fast Provisioning in Any Cloud
- Modernize Traditional Applications
- Continuous Delivery with Containers
- InterSystems IRIS in a Container

- Productivity for Interface Engineers
- Leverage Your Users for UI Design

This is just a handful of the rapid development and deployment sessions planned. For complete information, and to register, visit www.intersystems.com/SDC.

I hope to see many of you in San Antonio!
