Order by date

Hi community,

The question that I have , it's very simple. I developed a pivot that contains two rows, the first it's a date and the other another field. I need to orde by date in descending order and I can´t find where I can do this. I saw that it's a option Sort members, but it's based in a condition of the measures.

Can someone help me with this.

Thanks in advance.
