Embedding DeepSee Web dashboards into Web Appcation

Hi Community,

I am using a method taht calls a Dashboard in Deepsee web from an application , but I want to know if it's possible to not showing the header, this part that have the search button, the name of the namespace, etc..

This is the method :

```
Method %OnAfterCreatePage() As %Status
{
    //Set contratistaId = $Get(%session.Data("ContratistaId"), "")
    //Set gerencialId = $Get(%session.Data("GerencialId"), "")

    //Set filter1 = "&SETTINGS=FILTER:Gerencia.Gerencia.idGerencia."

    //Set urlBase = "DeepSee.UserPortal.DashboardViewer.zen?DASHBOARD=Operacion%2FOportunidad%2FVis
taOportunidad.dashboard&NOTITLE=1&NOMODIFY=1&NOBORDER=1&RESIZE=false"

    //dsw/index.html#!/d/Operacion/Oportunidad/VistaOportunidad.dashboard?ns=GESTORVENTAS
    Set urlBase = "http://190.162.201.51:57772/dsw/index.html#!/d/Operacion/Oportunidad/Vis..."
    //Set urlBase = urlBase _filter1 _gerencialId

    Set urlBase = urlBase

    Set iFrame = %page.%GetComponentById("dashboard")
    Set iFrame.src = urlBase

    Quit $$$OK
}
```

Thanks in advance

Regards,

Jaqueline K.
