GlobalSummit 2018 share your experience with Docker

GlobalSummit too close now, so many people going to be there from so many companies. I'm sure that somebody already uses Docker or even Kubernetes in their work, I do. And would like to share my experience and thoughts about what could be better. And want to hear other people about their experience, how you use Docker, what issues have you faced and how did you solve it. I think InterSystems will help us to find time and place when we could do it, and hope [@Luca Ravazzolo](#) will join us. I think It also could be good as the topic at Unconference.
